Dear Hiring Manager,

I am excited to apply for the Data Scientist role supporting Consumer Revenue at Vox Media. The opportunity to build tools and models that directly influence subscriber engagement, retention, and growth strongly aligns with my background in applied machine learning and data-driven product development.

In my current role, I design and deploy predictive classification and regression models over multi-million record datasets, improving user engagement by 30% through structured feature engineering and model optimization. I have worked end-to-end—from defining business questions, performing exploratory data analysis, building datasets using SQL, developing models in Python, and translating outputs into measurable product impact.

I am particularly motivated by problems such as churn risk modeling, LTV estimation, retention measurement, and marketing attribution. I have experience designing experimentation frameworks, conducting hypothesis testing, and building evaluation pipelines that quantify business impact through A/B testing and performance metrics. I am comfortable operating in cloud-based data environments and collaborating closely with data engineering and product teams to ensure models are production-ready and actionable.

I am excited about the opportunity to contribute to Vox Media's next stage of growth and apply data science to deepen subscriber understanding, optimize retention strategies, and build scalable measurement frameworks.

Thank you for your time and consideration. I look forward to the opportunity to speak further.

Sincerely,

Jayanth Dasamantharao
