PROFESSIONAL EXPERIENCE

AI Engineer - Fedway, EliteUS Software Solutions

Aug 2024 - Present | Piscataway, NJ

- Developed an AI chatbot using **NLP, AWS Bedrock, LLMs, and Streamlit** for system instructions. Leveraged **advanced language models** for seamless deployment and real-time communication.
- Integrated **vector databases, text-image matching, and LangChain** for dynamic interactions and enhanced response accuracy through **Retrieval-Augmented Generation (RAG)**.
- Tech Stack: Python, AWS Bedrock, Azure, OpenAI, LangChain, Chroma, Vector db, PyMuPDF, Pillow.

Data Science Intern, Harvest Software Solutions, LLC

June 2023 - Sept 2023 | Jacksonville, Florida

- Optimized real-time ad campaigns by deploying **H2O AutoML and XGBoost models**, achieving a 70% boost in predictive accuracy and ad spend efficiency.
- Leveraged **FastAPI** to deploy NLP models with Hugging Face Transformers for customer sentiment and topic analysis on a 5M+ row dataset, providing actionable insights on engagement.

Application Development Associate, Accenture Solutions Pvt. Ltd.

June 2021 - Aug 2022 | Hyderabad, India

Database Analyst, Regeneron Pharmaceuticals Inc. - Client Data Analysis & Warehousing

- Optimized **ETL** workflows and implemented **automated data pipelines in Python**, reducing support calls by 50% and enhancing data processing efficiency.
- Performed large-scale data analysis using **SQL** and **AWS Athena, Redshift** on large scale datasets; visualized insights and built interactive dashboards in **Tableau and Power BI**.
- Increased system reliability by 25% through **DDL optimization, seamless data integration, and performance tuning**, ensuring stable **data warehousing** and reporting operations using **SQL Workbench**.

Research Lab, Andhra University

January 2021 - June 2021 | Visakhapatnam, India

Self Driving Cars Using Image Processing and Deep Learning

- Engineered **Convolutional Neural Networks (CNNs)** for autonomous lane detection and object recognition, leveraging **YOLO and Faster R-CNN** architectures to optimize real-time detection and classification accuracy.
- Enhanced model generalization through **image pre-processing** techniques like **Gaussian blurring and color space conversion**, and integrated **multi-sensor data** from **radar, lidar, and cameras** to improve navigational precision.
- Developed a real-time simulation environment using **Unity3D and a Flask backend** for dynamic parameter monitoring and system validation, enabling high-fidelity testing of autonomous driving functionalities.

TECHNICAL SKILLS

Programming: Python(problem solving), R, Scala, MATLAB.

Machine Learning: Ensemble Methods, Classification models, Gridsearching, Clustering, Regression Analysis, LightGBM.

Statistical Analysis: Causal Inference, Hypothesis testing, T-test, Chi-Squared, Anova, Regression, Predictive Modeling.

Deep Learning: Neural Networks, Computer Vision, AI, NLP, BERT, GANs, AWS Bedrock, Azure, OpenAI models.

Language Models: OpenAI, Azure, AWS Bedrock, Hugging Face Transformers, LLaMA, prompt tuning, RAG, Langchain.

Data Engineering: SQL, PostgreSQL, Tableau prep, Kafka, Apache Spark, Data Warehousing, Hadoop, GCP, Docker.

EDUCATION

Rutgers University, Masters in Data Science

Sept 2022 - May 2024 | New Brunswick, NJ

Relevant Coursework: Statistics: Statistical Modeling and Computing, Stat Learning; Neural Networks, Machine Learning, Data Structures and Algorithms(Python), Data Wrangling (R), NLP, Data Mining. **Projects Overview:** [Portfolio](#).

Andhra University, B.Tech in Electrical and Electronics Engineering

2017 - 2021 | Visakhapatnam, India

RESEARCH PROJECTS

Bayesian Classification - [Bayesian Networks, PyMC3, Informative Prior Distributions] Developed Bayesian logistic regression models using PyMC3 to predict diabetes status, incorporating informative priors. Evaluated performance with recall and f1-score metrics, comparing outcomes between uniform and normal distribution priors.

Language Identification - [Naive Bayes, Logistic Regression, BERT, GloVe embeddings] Worked on identifying languages using Naive Bayes, Logistic Regression, and DistilBERT, incorporating n-grams analysis achieving 96% accuracy.

Auto Insurance Fraud Detection - [Python, Data Visualization, ML models - Random Forests, KNN, SVM, Decision Trees, XGBoost, Regression] Executed diverse ML strategies and time series analysis for auto insurance fraud, prioritizing reduced false negatives. Chose K-Nearest Neighbors (KNN) with an impressive 97% recall.

Thank you for considering my application. I'm available to start working immediately.
